Request for Reflections and Modifications of the Formula Windsurfing Measurement

A submission from the French Sailing Federation

Proposal

Request for reflections and modifications of the Formula Windsurfing measurement

The senior practice of the Formula Windsurfing in the frame of the current measurement is expensive. Indeed, it is a restriction measurement but it allows many things among other things in the choice of the equipment: float and principally riggings.

Formula is a promising sailboard. For its future and development, it would be advisable to think of modifications or to a restrictive evolution of that measurement. Another solution could be to let the current measurement for some competitions not to penalise the evolution of the equipment, and to set up, in parallel, a practice with much more restrictions concerning the equipment.

This, in order to limit the cost of the senior practice and to allow an easier access for competitors.
