

Standard Measurement for Windsurf Sails

A submission from the Federation Française de Voile

Proposal:

To establish and publish a standard method for Area Measurement of Windsurf sails for use by all Windsurf classes using Sail Area Measurement restriction.

Current Position:

No current position

Reason:

Windsurfing Classes are presently using different methods of measurement of the sails. A standard methodology is strongly needed.

A proposal of standardized methodology is actually prepared and should be ready in August – September 2005.
