**Windsurfing Equipment Evaluation**

**Regulation 16**

A submission from the International Funboard Class Association

**Proposal**

That the ISAF conduct a practical evaluation of equipment available for the windsurfing event in the Olympic regatta. This evaluation shall take place before the mid-year meeting of the Council immediate before the meeting referred to in Regulation 16.1.(c).

To be considered for evaluation the equipment shall be “actively racing” either within an existing ISAF International Class, or an existing ISAF Recognized Class.

**Current Position**

This submission is additional to, and complimentary to, the existing regulation.

**Reason**

1. To ensure that equipment incorporating the latest developments, but proven in competition, is incorporated in the list of equipment choices available for selection in the next Olympic regatta.

2. To ensure the best and most suitable equipment is selected for the women’s event as well as for the men’s event.

3. Modern equipment is attractive to media, the public, and the competitor.

4. To improve the image of both windsurfing and sailing as an Olympic sport.
