Equipment Rules of Sailing

C.6.4(j) List Angle

A submission from the Chairman of the Equipment Committee

Purpose or Objective

To create a new ERS definition of List Angle

Proposal

Add new rule as follows:

(i) LIST ANGLE
The maximum angle of heel of the boat, measured relative to the boat floating upright, in the condition for weight and flotation measurement with moveable ballast moved fully to port or starboard.

Current Position

None

Reason

1. To create a new definition of List Angle which invokes the new definition of Condition for Flotation Measurement. This is particularly useful for rating systems where the list angle is used for rating calculation purposes.
