Equipment Rules of Sailing

Subsection B - Rule G.5.4

A submission from the Chairman of the Equipment Committee

Purpose or Objective

To add a new leech measurement point in the ERS Section G subsection B - definition of quadrilateral sails.

Proposal

G.5.4 Seven-Eighths Leech Point

The point on the leech equidistant from the peak point and the three-quarter leech point.

Reorder remaining rules accordingly

Current Position

As above

Reason

1. To provide defined measurement points and measurements for an increasing number of classes that would like to control this area of the sail.

2. It is also very helpful to classes where the sail dimensions are not fixed and using upper width and upper leech point does not work due to affixed position being different on each sail.
