Title: Access 303 Class

Subtitle: Incorporation of the Breeze 303 within the Access 303 Class

A submission from the International Access Class Association Inc

Purpose or Objective

To incorporate the Breeze 303 model within the Access 303 Class

Proposal

That the Access 303 ISAF Class includes the Breeze 303 model

Current Position

The Access 303 ISAF Class only includes the Access 303 Wide Seat model

Reason/s

The Breeze 303 has been developed by Access Sailing Systems in 2012 as a simpler and more economical version of the Access 303. The specifications and construction of the hull, foils, rudder box, spars and sails are identical. The only differences are the deck includes a moulded seat rather than a hammock seat, and the roller furling system has been simplified in the Breeze 303. It is the opinion of the IACA Technical Committee that the specification, construction and performance of the Breeze 303 is sufficiently similar to the original Access 303 version to warrant inclusion within the existing class.

A draft of the Access 303 Class Rules revised to include the Access 303 and Breeze 303 have been provided.
