

2016 Olympic Sailing Competition

Voting Procedure – Events and Equipment

A submission from the Japan Sailing Federation

Purpose or Objective

Provide the fairest way to select the best combination of 10 events for the 2016 Olympic sailing competition.

Proposal

List all possible combinations of 10 slates from submissions.

Each voter will have maximum number of votes (for supporting combinations) equal to 1/2 (round up to whole number) of the possible combinations of 10 slates.

After each voting, 1/2(round down to whole number) of the possible combinations received least votes will be eliminated. Voters do not need to use all votes.

Repeat the same voting method to select the best combination.

Current Position

None

Reason

Allocating one vote to voters will not allow each voter to vote based on his/hers “will” as many of voters have plural number of combinations which they are agreed to. Thus, delivers the fairest way to select the best combination.
